

```
"""
```

Write a function called `linear_search_product` that takes the list of products and a target product name as input. The function should perform a linear search to find the target product in the list and

return a list of indices of all occurrences of the product if found, or an empty list if the product is not found.

```
"""
```

```
def linearSearchProduct(productList, targetProduct):
```

```
    indices = []
```

```
    for index, product in enumerate(productList):
```

```
        if product == targetProduct:
```

```
            indices.append(index)
```

```
    return indices
```

```
# Example usage:
```

```
products = ["shoes", "boot", "loafer", "shoes", "sandal", "shoes"]
```

```
target = "shoes"
```

```
target2 = 'apple'
```

```
result = linearSearchProduct(products, target)
```

```
print(result)
```
